# Filters

Filtering allows you to display only the animation lines you currently want to work on. This simplifies the management of multiple animation lines and helps you focus on a specific group.
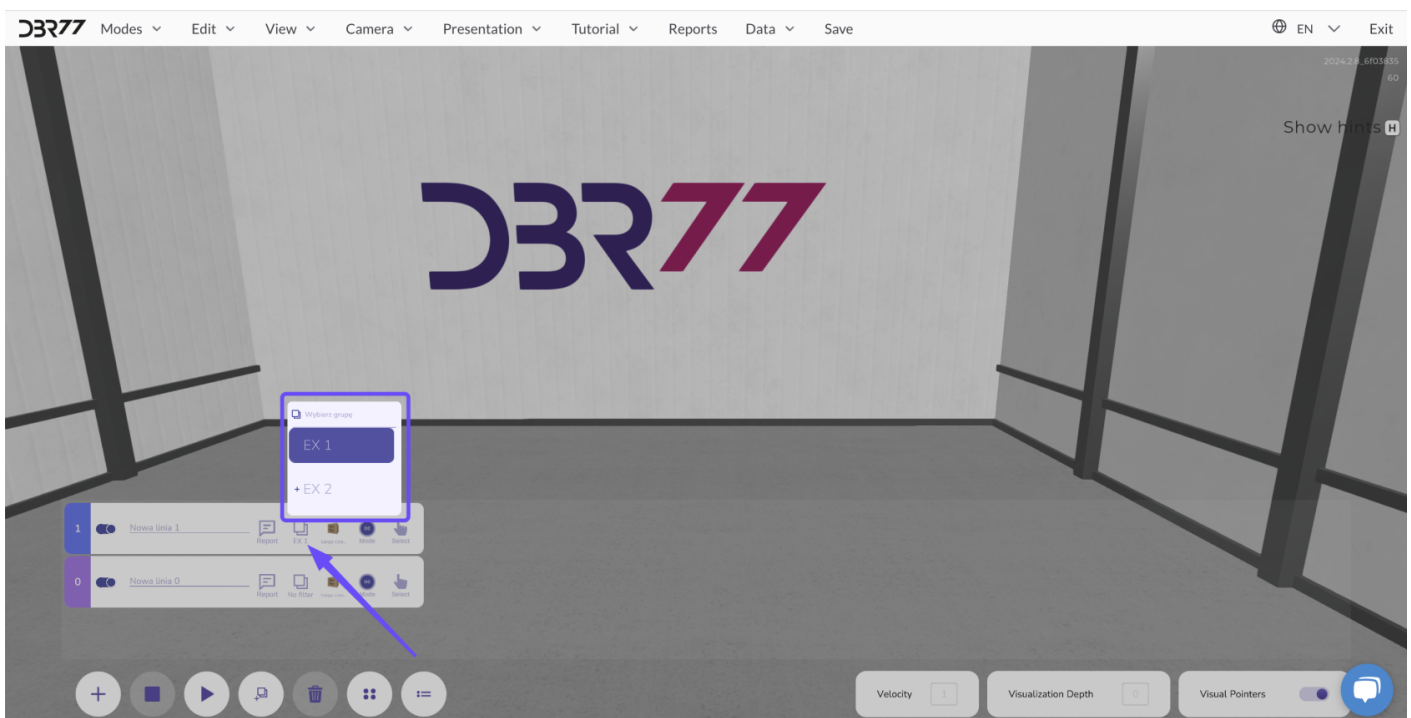

Creating Filters:
To create filter groups, switch to animation mode and click the fourth icon from the left in the bottom panel.

- You can then create a new filter group by entering the group name and confirming it.
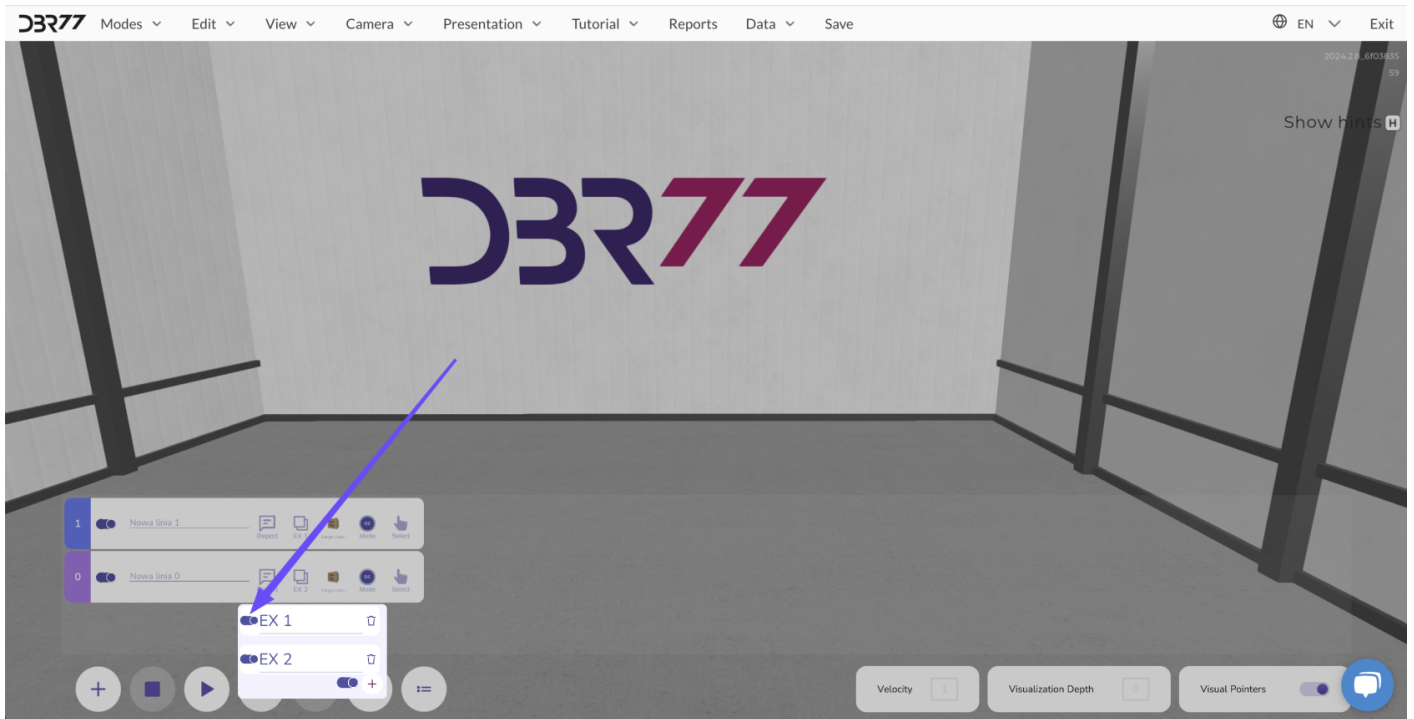

- After creating the group, assign individual animation lines to it. Select an animation line, right-click twice, and choose the option to assign it to the desired group.

Applying Filters:

- To display only selected animation groups, toggle the filter view by clicking the desired group in the filter panel.
- This will display only the animation lines of the selected group on the screen, allowing you to focus specifically on this part of the project.

Filtering significantly streamlines work in complex projects, especially when dealing with numerous animation lines simultaneously.
