

# Model Search Function in Build Mode

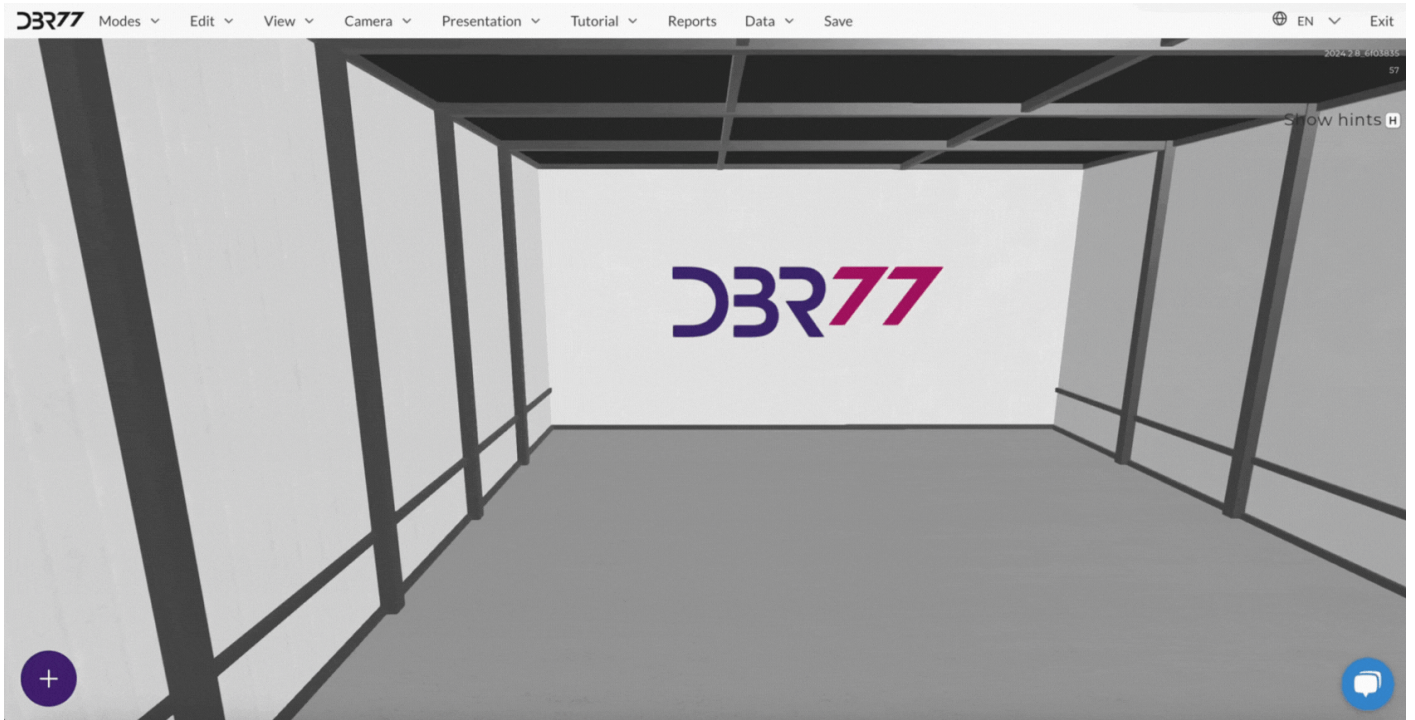

The **Model Search Function** in Build Mode of the 3D Studio DBR77 allows you to quickly and efficiently locate the objects you need for creating and editing scenes. Here's how to use this tool effectively:

## Accessing the Search Function

### Automatic Opening

- When you switch to **Build Mode** (via the main modes menu), the Model Search window automatically appears on the left side of the screen.

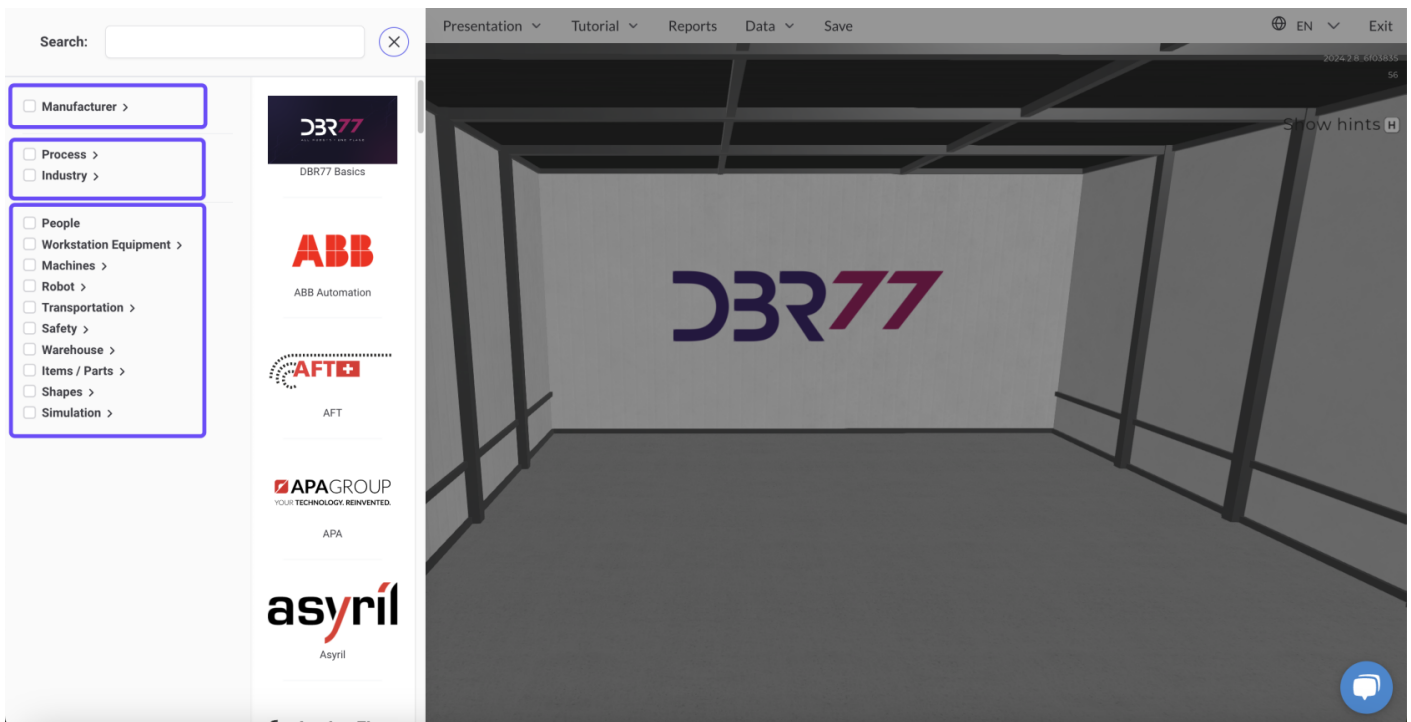

# Search Categories

The search function offers three groups of categories to filter models:

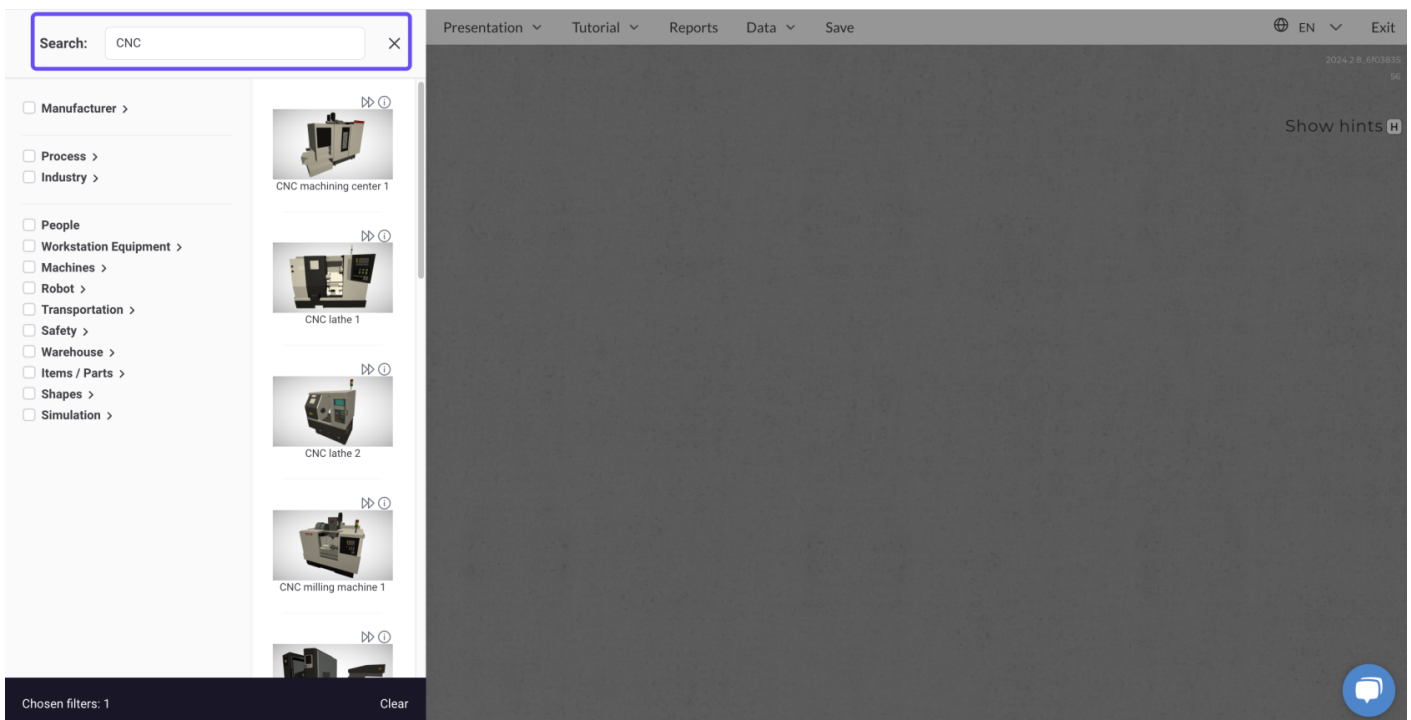

1. **By Manufacturer:**
  - Search for models associated with a specific manufacturer.
2. **By Process or Industry:**
  - Locate models suitable for specific production processes or industrial sectors.
3. **By Object Type:**
  - Filter models by type, such as machines, robots, workstations, etc.

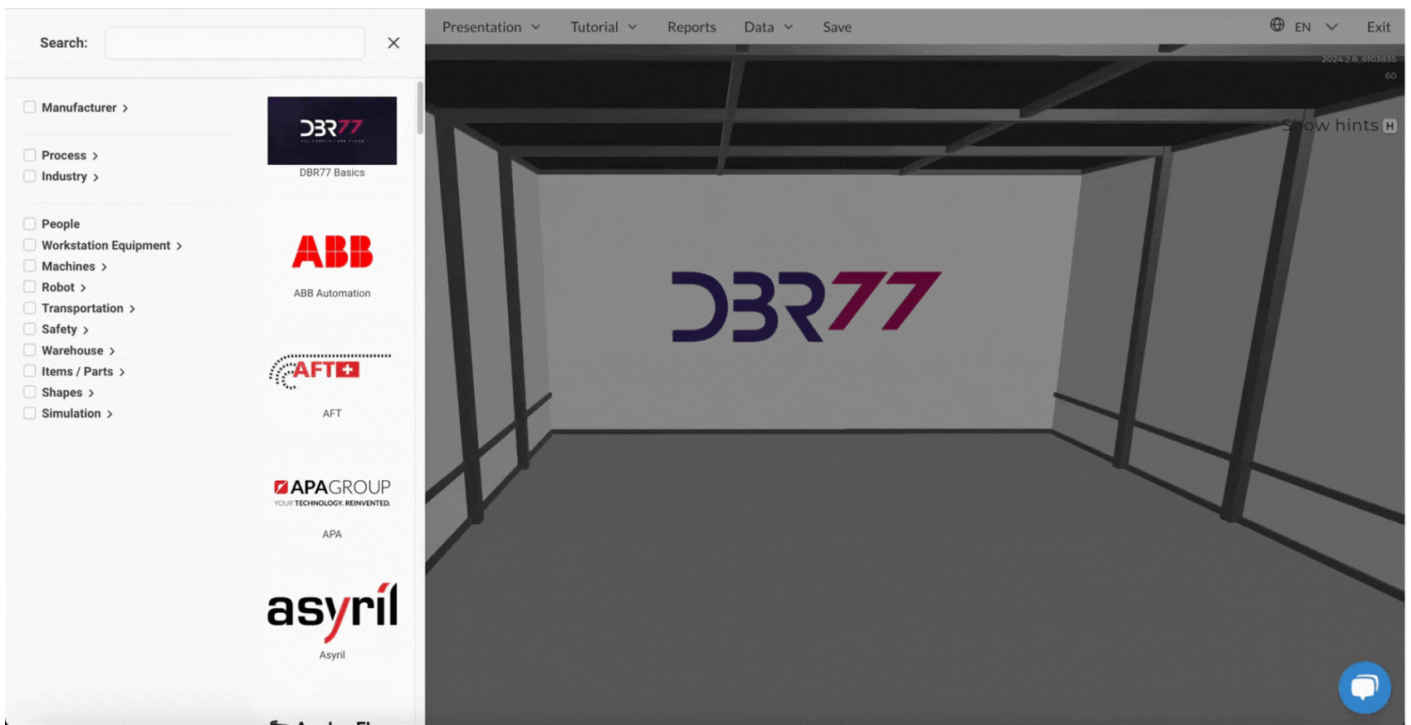

# Text Search

## Text Input Field

- Use the input field to directly search for a model by name.
- Enter the name, and the search will display matching results automatically.

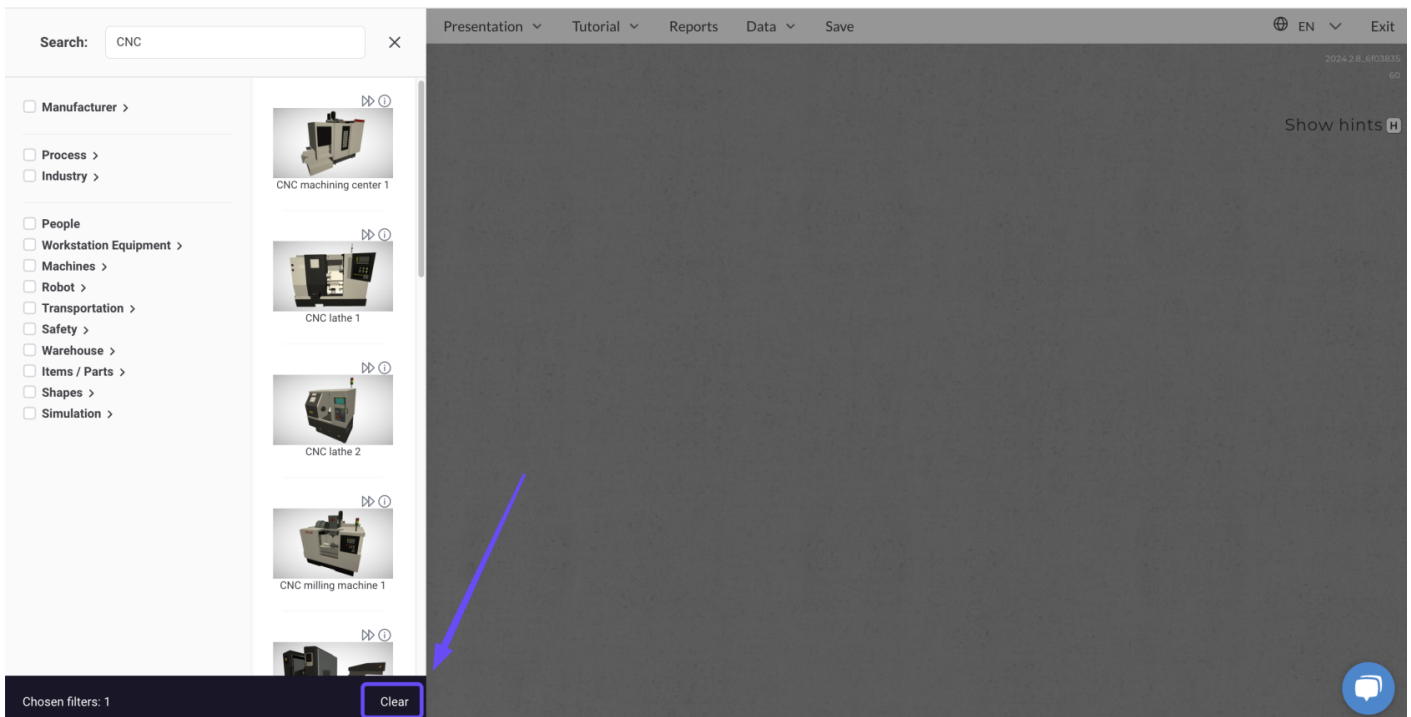

# Managing Filters

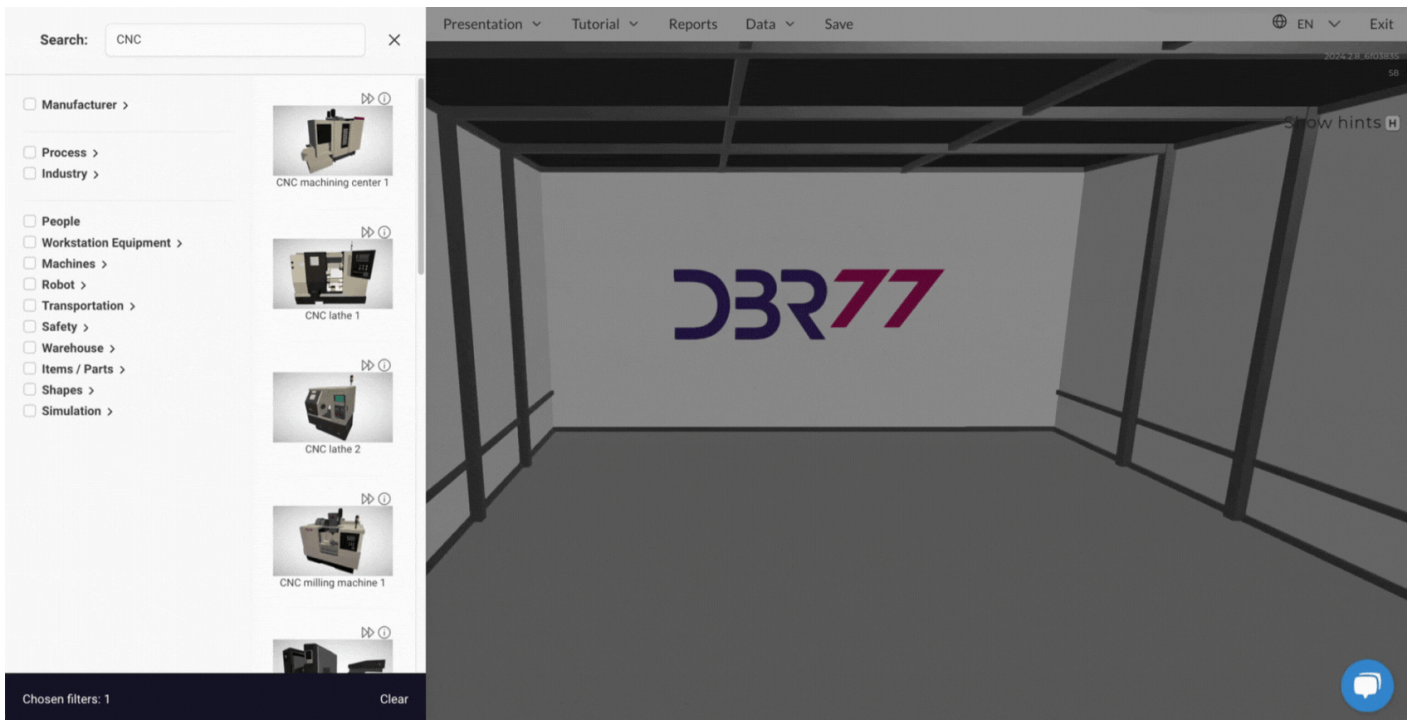

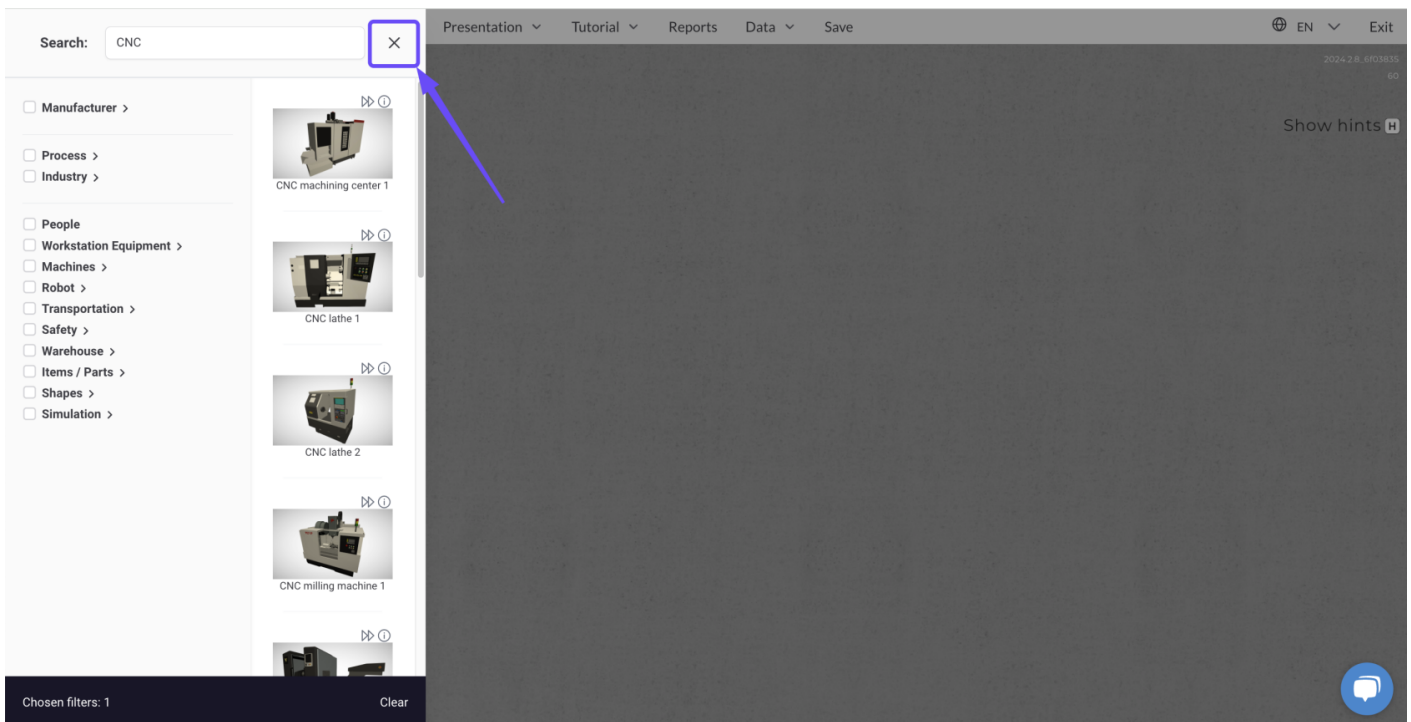

- **Clear Filters:**

To remove all applied filters, click the "**Clear**" button at the bottom of the search window.

- **Close Search Function:**

To close the search tool, click the "**X**" icon in the top-left corner of the search window.

The Model Search Function simplifies and speeds up the process of finding the right objects, ensuring efficiency in scene creation and editing.
