

Visual Indicators

Visual indicators are a tool that display the progress of the animation in real-time and provide information about process downtimes. They can be toggled on or off as needed to gain a comprehensive overview of the animation flow.

How Visual Indicators Work:

- **Progress Tracking:**

Indicators visualize the current status of individual animation elements, allowing you to monitor the process flow in real-time.

- **Downtime Information:**

In cases of process disruptions, indicators highlight downtimes or delays, enabling quick analysis and facilitating improvements to the animation scenario.
